

ROYAL PAVING, the Innovators in Asphalt, announced their newest option in 2005. The BAGELA PORTABLE ASPHALT RECYCLER is the German-built machine that is the only one on the market that does not allow flame to come in contact with the input asphalt during processing. We were a part of the launch in North America and are now the most experienced contractors in Canada. We can offer pavement maintenance and new construction asphalt **24 hours a day, 7 days a week, 365 days a year**. Your most remote locations are now easily accessed with this ultra-portable machine and you're no longer at the mercy of the big producers.

- 100% Recycled Hot Mix Asphalt
- Portable On-Site Production
- Minimizes Disruption to Business and Commercial Facilities
- 24/7/365 ALL-SEASON Operation
- Proven German Technology Now Available in Canada
- Not Like Any Other Asphalt Recycling Machine Previously Available
- **Eliminates** Cold Patching
- Ideal for all Asphalt Maintenance and New Construction
- The Bagela System's Recycled Asphalt Meets or Exceeds Current Specs

As the North American economy continues its dependence on imported crude oil and its refined derivatives, the economics of recycling petroleum derived products will continue to be increasingly favorable. The costs of hydrocarbons and their by-products are still trending upward and, over the long run, will continue to do so, given their non-renewable nature.

The Bagela has been accepted and used extensively throughout Europe for decades. Up to now, higher petroleum prices in Europe made an earlier and more compelling case for asphalt recycling than could be made here in North America, but re-using our existing resources can no longer be ignored.

In addition to economic considerations, recycling is clearly gaining increased favor with the general populace. Recycling is environmentally correct.

It is, quite simply, the right thing to do.
